FOR BUILDERS
Fmi

Warm Up To A High-Efficiency Gas Log Heater

There's a tremendous demand for vent-free gas heaters, because at 99%, they're the most energy-efficient of all hearth products. Fmi's new re-designed Ember Master™ vent-free gas log heaters deliver these benefits and more. They offer a wide variety of log, burner, and control choices and patented design technologies for the most realistic vent free flame presentations in the industry!

Homeowner Highlights:

- **Visual appeal**—The “EZ” Series features patented glowing ember ramp technology for a deep smoldering glow, while the “EM” Series utilizes loose ember material engineering for the mature fire look of fallen, burning coals. Both designs offer your choice of realistic new refractory concrete or ceramic fiber logs and ember beds with intricately detailed bark, split wood, and even charred log textures. All Ember Master™ burner designs feature random dancing yellow flames for a full and impressive flame picture.
- **Control choices**—Ember Master™ vent-free gas log heaters are available with variable manual, wall switch, toggle switch or hand held remote control operations. All models come standard with electronic push button ignition.
- **Dollar-saving efficiency**—All Ember Master™ gas log heaters provide 99% energy efficiency which means dramatic energy savings.

Builder Benefits:

- **Versatile, space saving installation**—With no chimney to worry about, an Ember Master™ gas log heater (in an Fmi vent-free gas fireplace) is an extremely economical way to include a complete hearth feature to any floor plan. And they can be added just about anywhere.
- **Economical**—Installation costs come way down when you eliminate venting construction. Particularly in multi-story housing.
